## Gen-over-gen DRAM technology leadership

Micron continues to lead the industry, advancing from  $1\alpha$  (1-alpha) and  $1\beta$  (1-beta) to  $1\gamma$  (1-gamma) technology

(1) 1z is the previous version of DRAM technology before 1α. (2) Based on calculations comparing 24Gb density DDR5. (3) Based on calculations comparing 16Gb density DDR5. (4) Calculated based on overall bits per wafer comparing 1β and 1γ process.
